DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed July 22, 2004 with respect to claims 1 and 2 have been fully considered but they are not persuasive. Applicant argue the cited prior art fails to teach the invention defined in claim 1 since it has been amended to modify "[a] plurality of hand sets" to "first and second hand sets (A,B), whose transmission and reception frequency band are different." As set forth below a new prior art reference has been found to teach the claimed subject matter including this further limitation.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1,2 and 5 are under 35 U.S.C. 102(e) as being anticipated by Carney et al (US 5,970,410).

Consider claim 1. Referring to Fig.1, Carney et al disclose a communication apparatus (12-1) for converting a frequency of received signals from first and second hand sets (19-1, 19,2) whose transmission and reception frequency band are different, see Fig.2, and retransmitting the signals, comprising

"a whole spectrum inverter," see Fig.4, for inverting a frequency spectrum including first and second received signals from the first and second hand sets, wherein

Art Unit: 2634

the first and second signals included in the frequency spectrum inverted in the whole spectrum inverter are retransmitted. See col. 7, lines 7-28 where it is described that a received signal from the mobile stations is translated by 85 MHz to a corresponding channel in the upper sub-band.

Regarding claim 2, though not shown, bandpass filters are required to receive band-limited signals of Carney et al to suppress out-of-band noise signals.

Regarding claim 5, the communication apparatus, i.e., the translation base station (12-1) converts a received frequency to another transmit frequency. See Fig.2 and col. 7, lines 11-13.

Allowable Subject Matter

4. Claims 3,4,6-17 are allowed.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2634

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
